CAREER OBJECTIVE

I am a motivated Computer Science and Engineering student seeking a Software Development Internship to apply my programming fundamentals and problem-solving skills in a professional environment. I aim to gain hands-on exposure to software development and enterprise technologies while contributing effectively to team objectives and continuously enhancing my technical and analytical abilities.

SKILLS

Programming Languages: Frontend (HTML, CSS, JavaScript), Python, Java, MySQL, Appian (BPM Tool)

Backend: Flask API, REST API

Cloud Platform: Amazon Web Services (AWS)

AWS Services: EC2, S3, IAM, VPC, CloudWatch (Basic)

Core CS Fundamentals: Data Structures & Algorithms (Java) – Advanced, Object-Oriented Programming (OOP), Software Development Life Cycle (SDLC)

AREA OF INTEREST

Software Development • Data Structures & Algorithms • Cloud & DevOps (AWS) • Web Development • Database Management Systems • Low-Code Development • Backend Development

EDUCATION

Manakula Vinayagar Institute of Technology

Bachelor of Technology in Computer Science and Engineering

2024 – 2028 | Overall CGPA (Till Date): 8.6

CERTIFICATIONS

- CCNA: Switching, Routing, and Wireless Essentials — Cisco
- AWS Academy Graduate – Cloud Foundations – Training Badge — Amazon Web Services (AWS)
- AWS Cloud Practitioner Essentials — AWS / Simplilearn
- Python Programming Certificate — HackerRank
- Getting Started with Artificial Intelligence — IBM
- Introduction to Generative AI Studio — Simplilearn / Google Cloud

ACHIEVEMENTS

2nd Prize — Techno Bot 2026, MITilence, Manakula Vinayagar Institute of Technology

2026

- Secured 2nd Prize (₹1,000 cash prize) for presenting **Nexora**, an AI-powered exam preparation platform for university students (full project details under Projects).

EXPERIENCE

Backend Developer Intern — CodTech IT Solutions

30 March 2026 – 27 April 2026

- **Task 1 — Blog Backend System (Node.js + MySQL):** Developed a backend system for a blog platform with authentication, post management, and commenting features.
- **Task 2 — Real-Time Chat Server (Node.js + Socket.io):** Built a real-time chat backend enabling instant communication between multiple users using WebSockets.
- **Task 3 — E-commerce Backend (Node.js + MongoDB):** Developed a backend for an e-commerce platform with user authentication and product management.
- **Task 4 — AI Recommendation System (Python + Flask):** Implemented a recommendation system using machine learning techniques to suggest similar items.

GitHub: github.com/Bhuvanesh0097/codtech-internship

SolidWorks CAD & RAG Chatbot Intern — Aktis Engineering Solutions Pvt Ltd

2 August 2026 – 15 August 2026

- **On-Site Engineering Internship:** Completed a 2-week on-site internship in a professional product-based engineering environment, working alongside experienced engineers on real-world problems.
- **SolidWorks Model Design & Automation:** Gained hands-on exposure to 3D model designing and automation workflows in SolidWorks, supporting CAD-based engineering processes.
- **Custom LLM Chatbot (RAG):** Built a custom LLM-based chatbot using Retrieval-Augmented Generation (RAG) to enable intelligent, context-aware responses.
- **Professional Development:** Strengthened workplace communication, collaboration, and professional conduct through daily interaction with engineers and mentors.

PROJECTS

Project 1 — Nexora: Intelligent Study Assistant

2026

- Developed an AI-Powered Exam Preparation & Study Assistant with a ChatGPT-style interface and RAG-based syllabus-restricted learning using ChromaDB.
- Built 2-Mark & 10-Mark Exam Modes with automatic question generation, answer generation, and progress tracking from uploaded PDF, DOCX, PPTX, and TXT files.
- Designed an AI Study Planner with memory-based learning to create personalized schedules and track completed topics across sessions.
- Implemented advanced features including Smart Subject Switching, Multiple AI Response Modes, Dark/Light Theme, and Automated Quality Validation.

GitHub: github.com/Bhuvanesh0097/Nexora

Project 2 — AI-Driven Stress Detection and Management System (MindMend)

- Built an AI-based web application to detect and classify stress levels from voice signals.
- Utilized deep learning models (CNN and LSTM) for feature extraction and temporal analysis.
- Achieved 85% accuracy and reduced user-reported stress levels by 32%.
- GitHub: github.com/Bhuvanesh0097/MindMend

Project 3 — AURISTRA'26 Hackathon — AI Phishing Detection System (NetFender)

25 March 2026 – 26 March 2026

- Built an AI-powered phishing detection system that analyzes emails and SMS in near real-time.
- Integrated IMAP (Internet Message Access Protocol) and SMTP (Simple Mail Transfer Protocol) for email processing, and ADB (Android Debug Bridge) for mobile integration.
